

# The Ultimate In Secure, Real-Time Credit Card Transaction Processing

**eProcessing Network is helping merchants** realize unlimited business opportunities and profits with the continued expansion of the Internet marketplace. eProcessing Network enables merchants with an Internet presence to process online credit card transactions automatically and in real-time, using a secure Web page accessed directly from the merchant's existing Web site.

## Providing Added Convenience

The latest, most sophisticated digital encryption is used to transmit information between the customer's browser and the eProcessing Network Secure Credit Card Transaction Processing Server. Direct communication lines are used to obtain real-time authorizations from the processor. Plus, merchants get the added convenience of having funds directly deposited to their bank account.

## Providing Added Security and Fraud Reduction

Secure order forms can be tailored to match the design of the merchant's Web pages and automatic e-mail messages are sent to the merchant, as well as the cardholder, confirming each transaction. Real-time communication between eProcessing Network and the processor helps ensure the accuracy and validity of each transaction. In addition, Address and Card Verification Services are performed to reduce the chance of fraud and chargebacks and open batches are automatically closed daily so merchants no longer need to purchase additional software to reconcile their transactions.

## It's Simple, It's Secure

Integrating eProcessing Network's credit card transaction processing service is easy to do. Here's how it works:

- When the merchant's customer is ready to buy, they are linked to the eProcessing Network Secure Payment Information Capture Form on the eProcessing Network Secure Transaction Processing Server. This page matches the design of the merchant's Web page, and the customer is given visual clues of the forms Secure Socket Layer (SSL) encryption.
- Once the customer submits payment information, the eProcessing Network Transaction Processing Server processes the transaction and gives the customer immediate transaction status – approval, decline or other status indication.
- If the processor approves the transaction, an e-mail message containing the customers order summary and shipping information is sent to both merchant and customer. Credit Card information is never e-mailed, sold or distributed to third parties.

The entire process is simple and convenient to use. eProcessing Network offers reliable and secure credit card transaction processing services and professional support every step of the way.
